

## CASE STUDY

# HEARTLANDS HOSPITAL

Arena Tiling were contracted to supply and fit 475m<sup>2</sup> of floor tiling to the main streets areas and three staircases of this new purpose built Diabetes and MIDRU Unit at Heartlands Hospital, Birmingham.

The £8.5m project was a new state of the art steel framed, two storey building with third storey plant room. Externally clad with rain screen cladding and with external landscaping. This project is designed with sustainability as a key driver and boasts ground source heat pumps, solar panels and underfloor heating.

The project is registered as a West Midlands Demonstration Project by Constructing Excellence.

The tiling element of the project consisted on a white 450x450 floor tile with a titanium border tile 450x250 complete with cut down skirtings. The tiling theme was carried out into the lobbies and up three staircases located at various ends of the building. The tiling on the project was received well by all involved and went without any snagging, which is a remarkable achievement on such a complex and large area.
